Star Slinger

A starship that slings rubber bands.
Seven shots, one at a time.

153 pieces | About 5 to 6 h | Ages 14+

No glue needed | 17 steps

Before you start

Push parts out from the back of the sheet. Do not twist them out.

Every part has a code. B12 is part 12 on sheet B. Codes for show faces are printed next to the part.

Press tabs straight in, firm but gentle. No glue needed.

Too tight? Rub the tab on the sandpaper two or three times, then try again.

Rub wax into every hole that turns. It makes moving parts smooth.

A check mark means: test it now, before you close it up.

Small parts. Not for children under 14. Keep spare parts until you finish.

Wear glasses when you fire. Only aim at the target. Never at faces, people or pets.

What's in the box

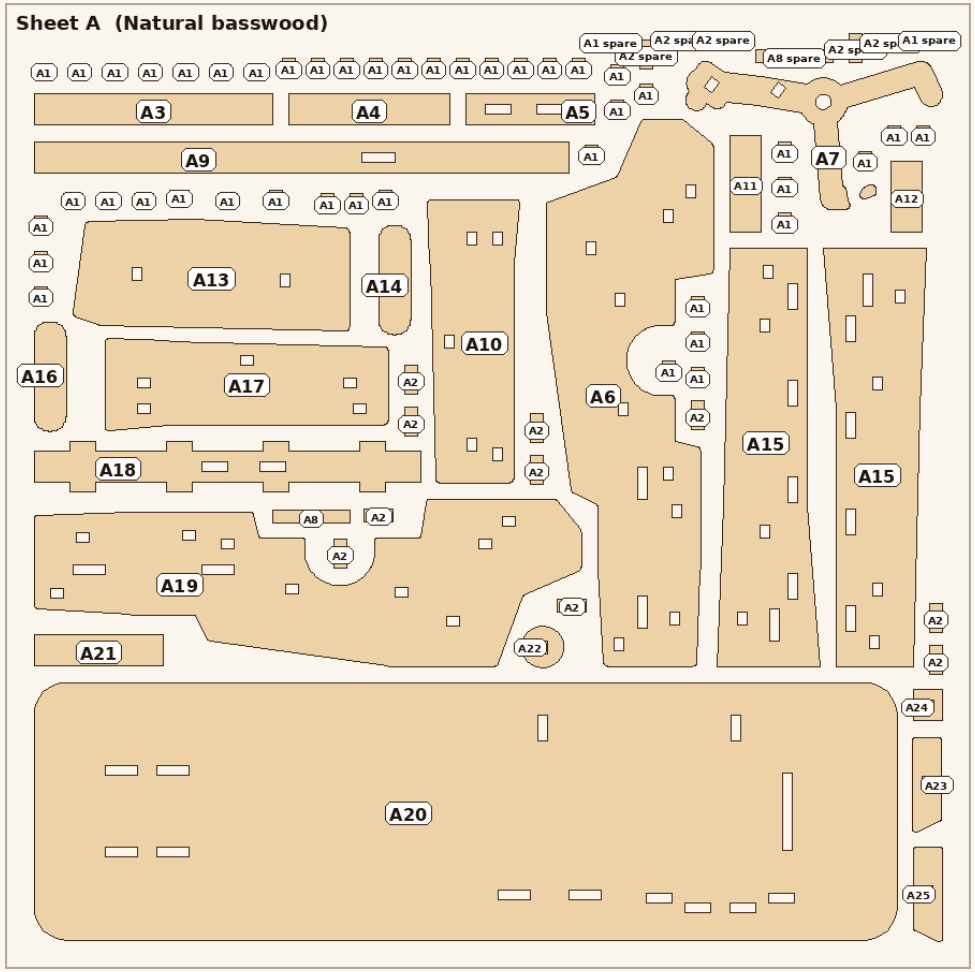

Sheet A: Natural basswood, 78 parts + 8 spares
Sheet B: Natural basswood, 9 parts + 47 spares
Sheet C: Sunset Orange (blaze tip), 38 parts + 2 spares
Sheet D: Haze Blue, 28 parts

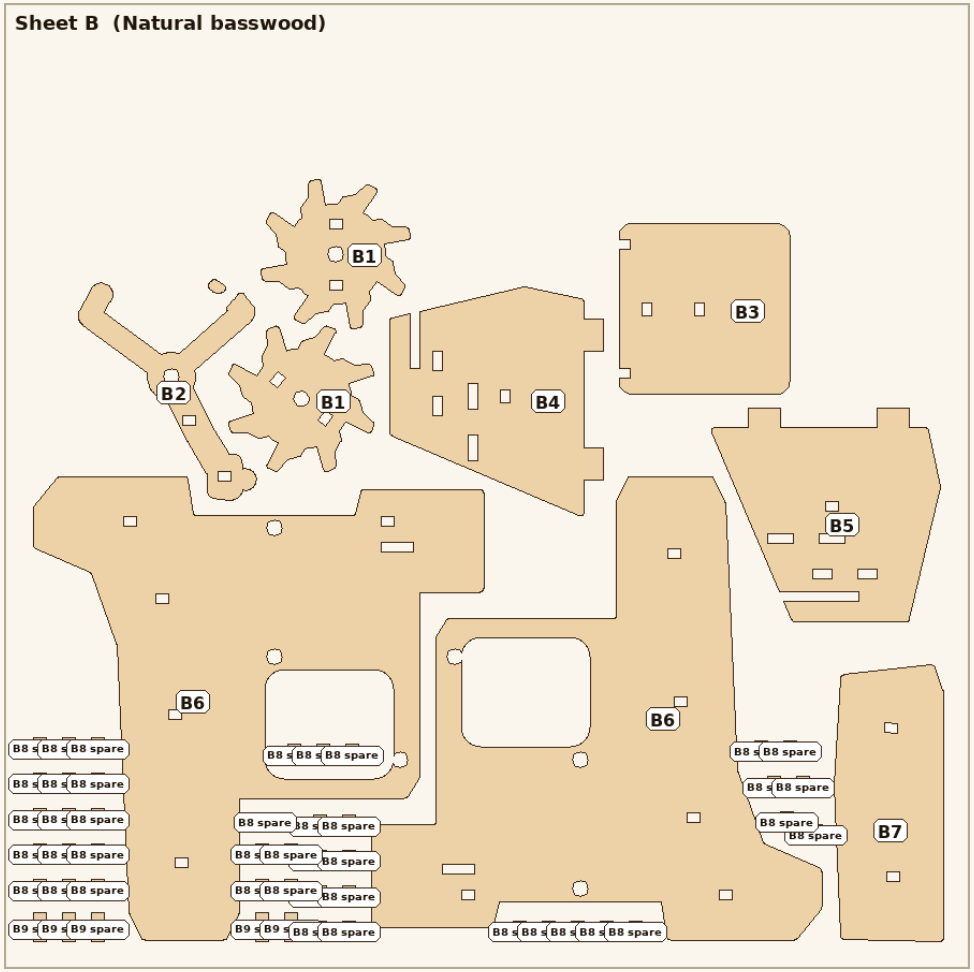

12 x #64 rubber bands (3.5 x 1/4 in), ammo
2 x #16 rubber band, trigger return
3 x 3/16 in birch dowel, 15.6 mm
1 x wax stick
1 x sandpaper 240 grit
3 x paper targets (printed)
1 x 3/16 in birch dowel, 63 mm (target hinge)

Build it in 3D on your phone: scan this code. Turn the model, tap any part, and watch it slide into place.

Parts maps

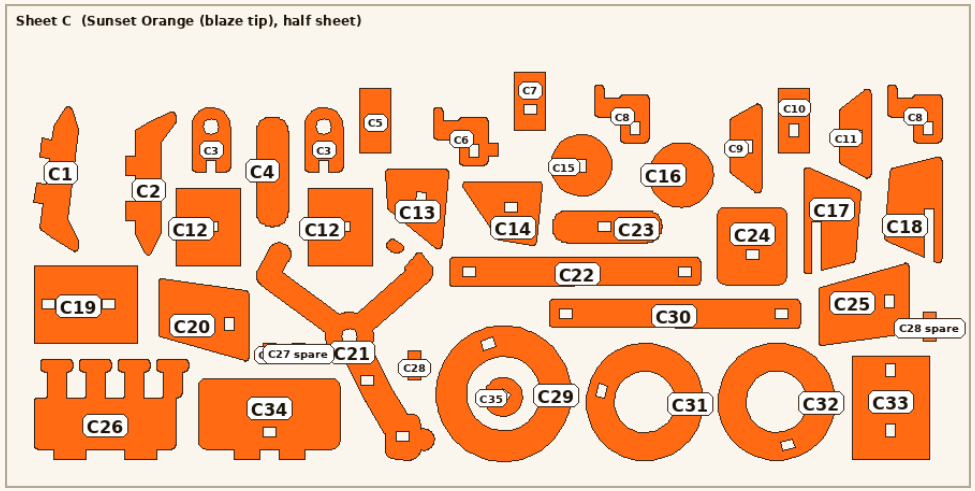

Find each part by its sheet letter and number.

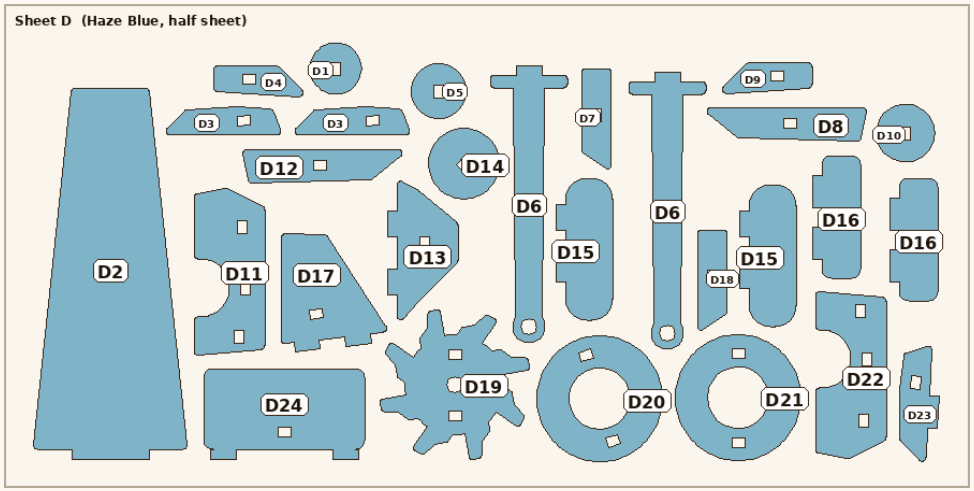

Parts maps

Find each part by its sheet letter and number.

1 Lay down the left inner walls

See it in 3D

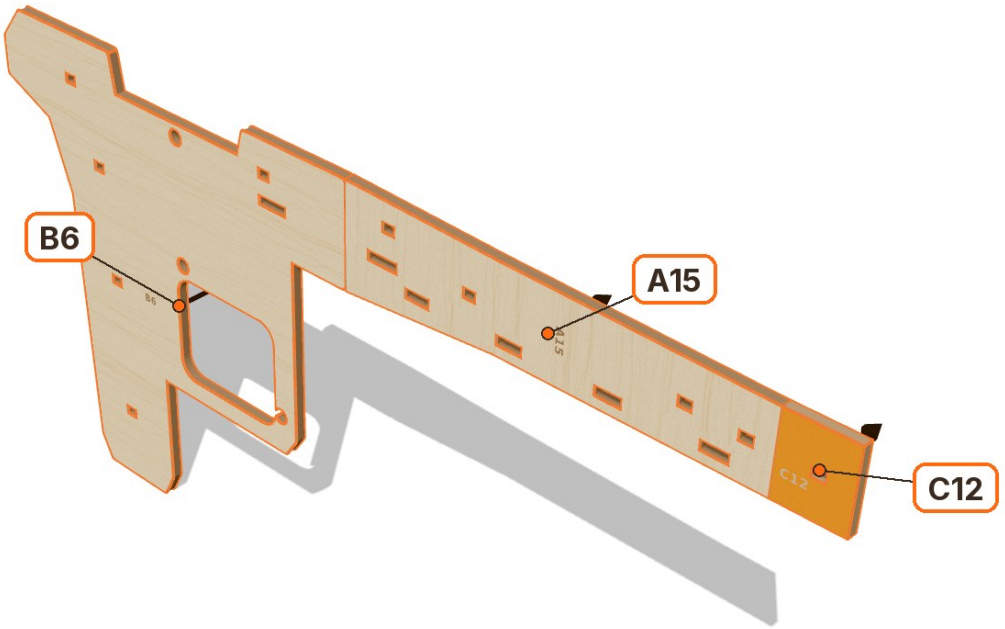

A15

B6

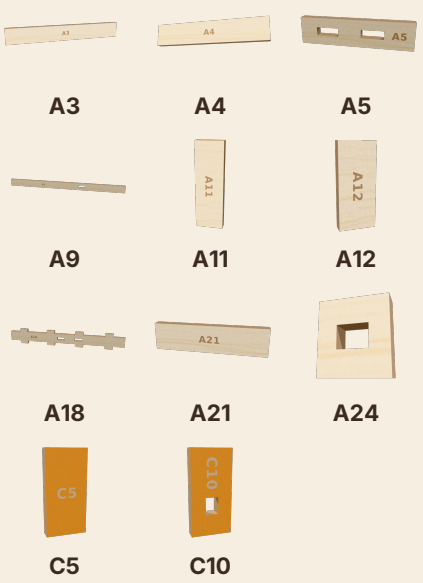

C12

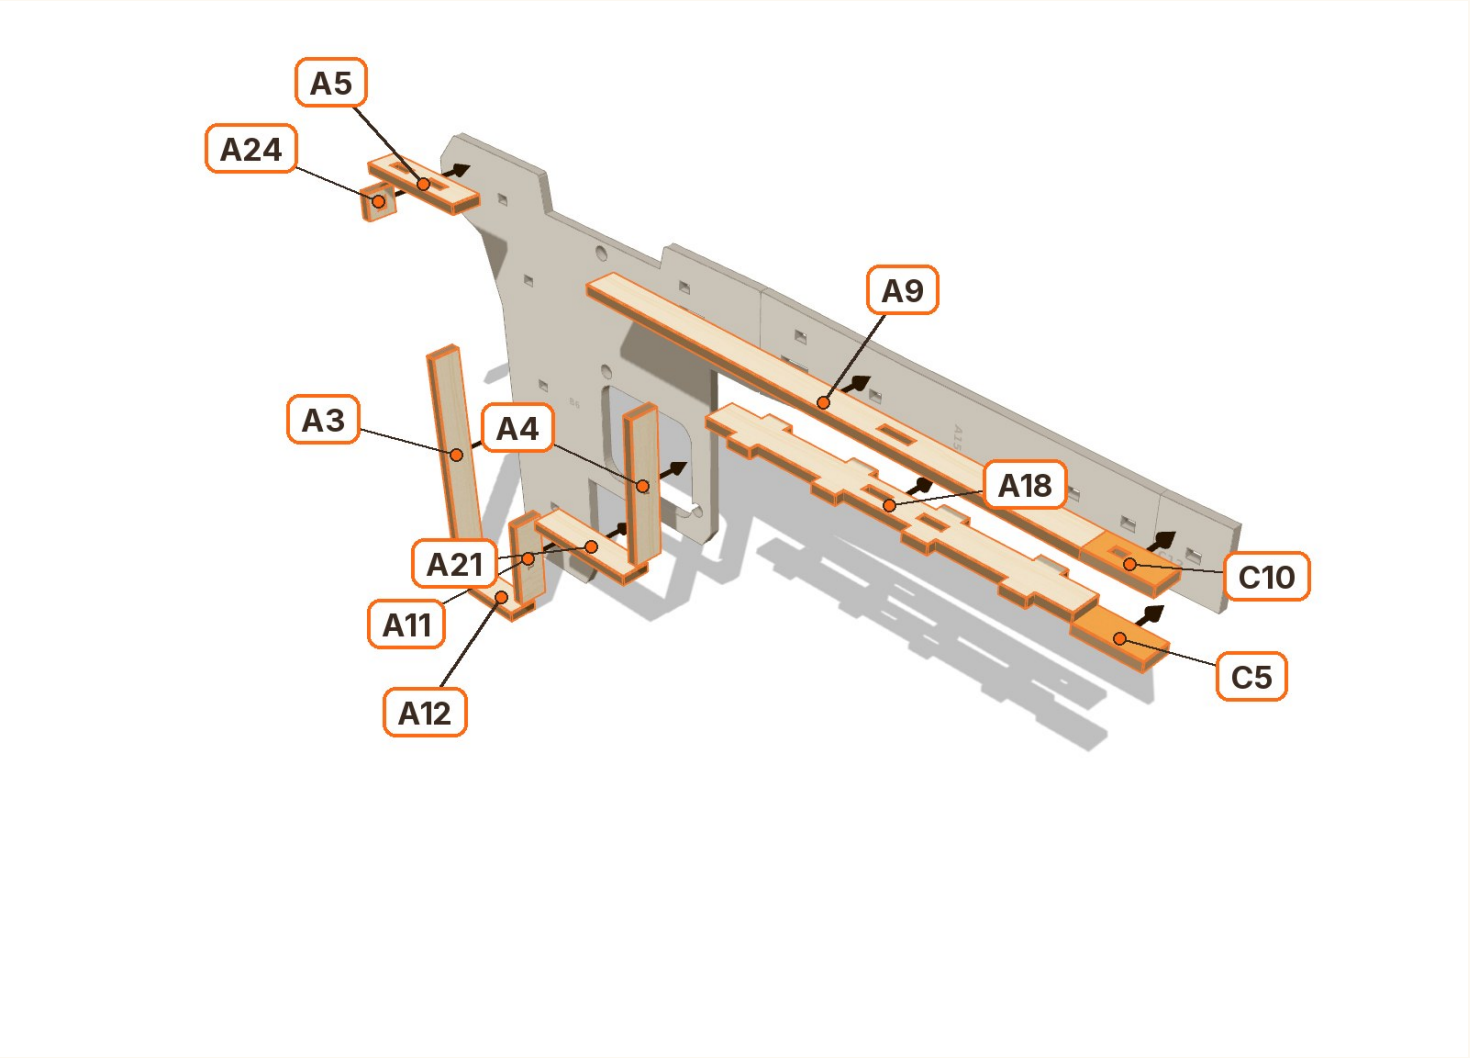

Build the ship lying on its left side.

2 Stand the ribs in the left walls

See it in 3D

Each rib has tabs on both long edges.

3 Build the star wheel and put it on its axle

See it in 3D

A2 x2

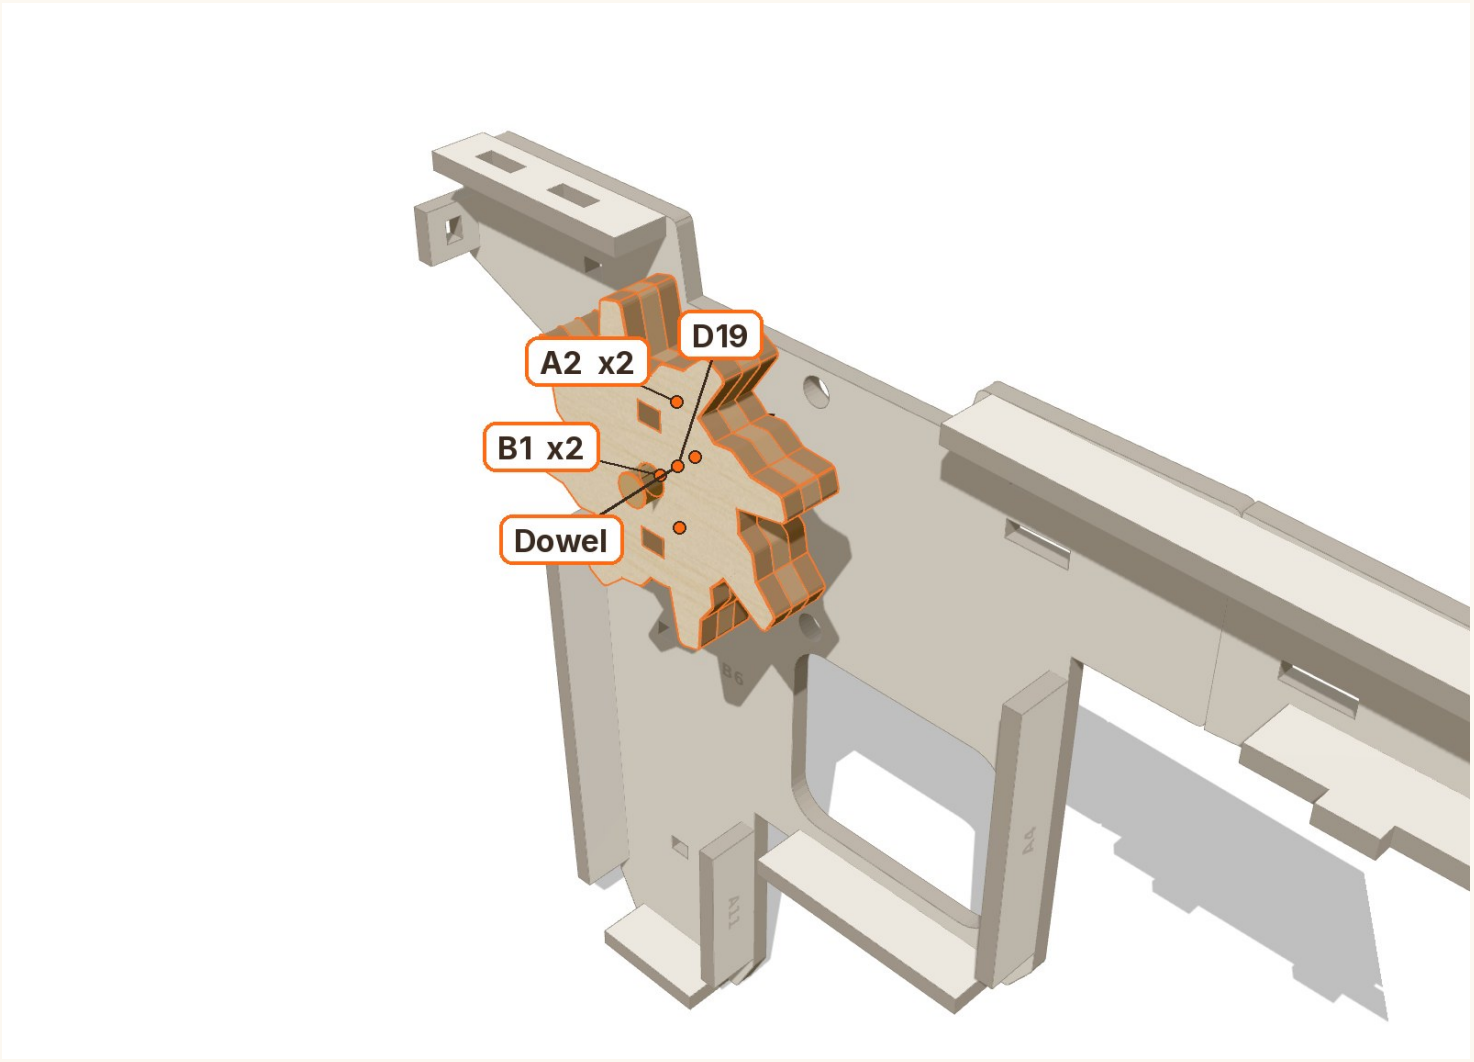

B1 x2

D19

Dowel 15.6 mm

Three discs, two pegs. Wax the axle hole.

TEST IT NOW
Spin the wheel with a finger. It should turn freely and wobble less than 1 mm.

4 Build the trigger and fit it under the wheel

See it in 3D

A2 x2

A7

B2

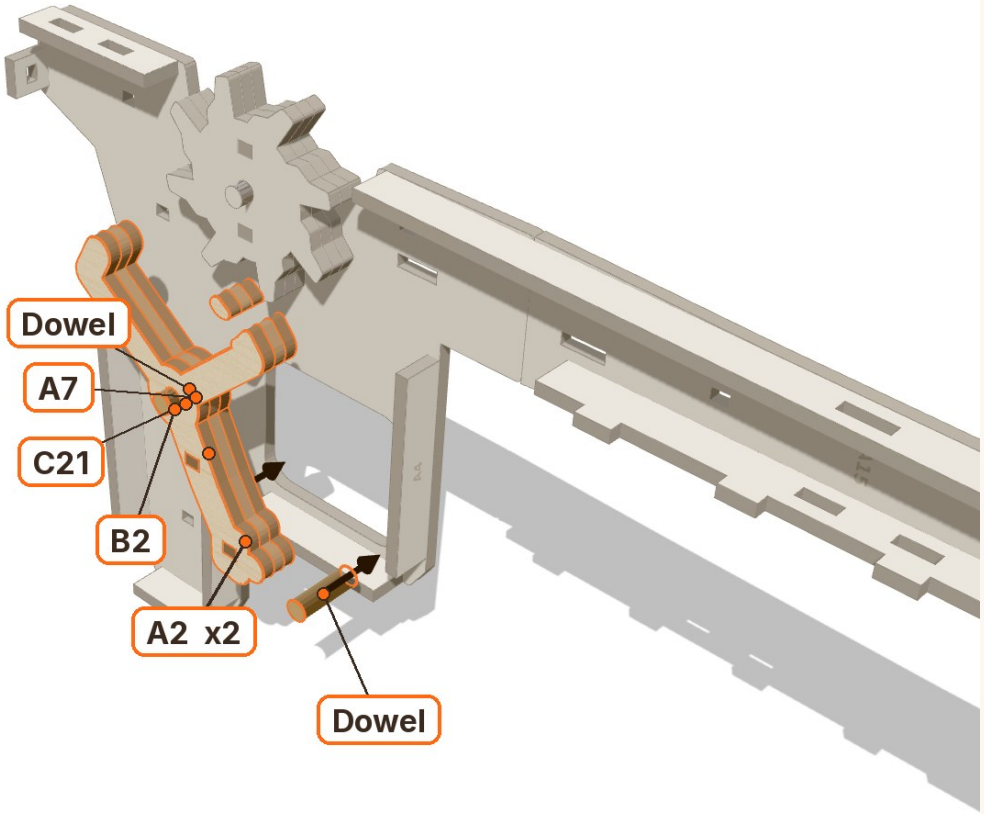

C21

Dowel 15.6 mm

Dowel 15.6 mm

The two pallets must point at the wheel. Wax the pivot.

TEST IT NOW
Press the trigger slowly: the wheel turns half a tooth. Release: another half tooth.

5 Close it with the right inner walls

See it in 3D

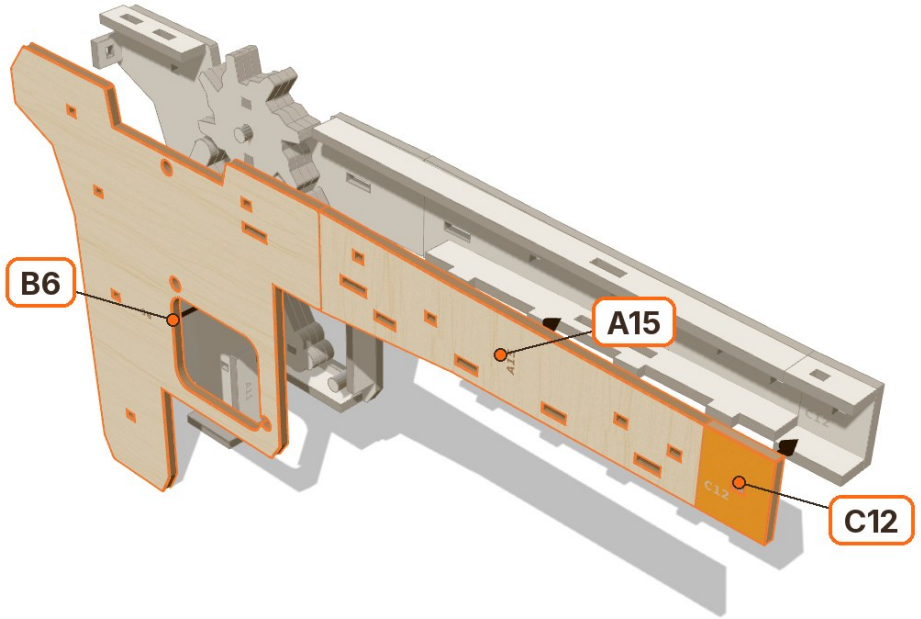

A15

B6

C12

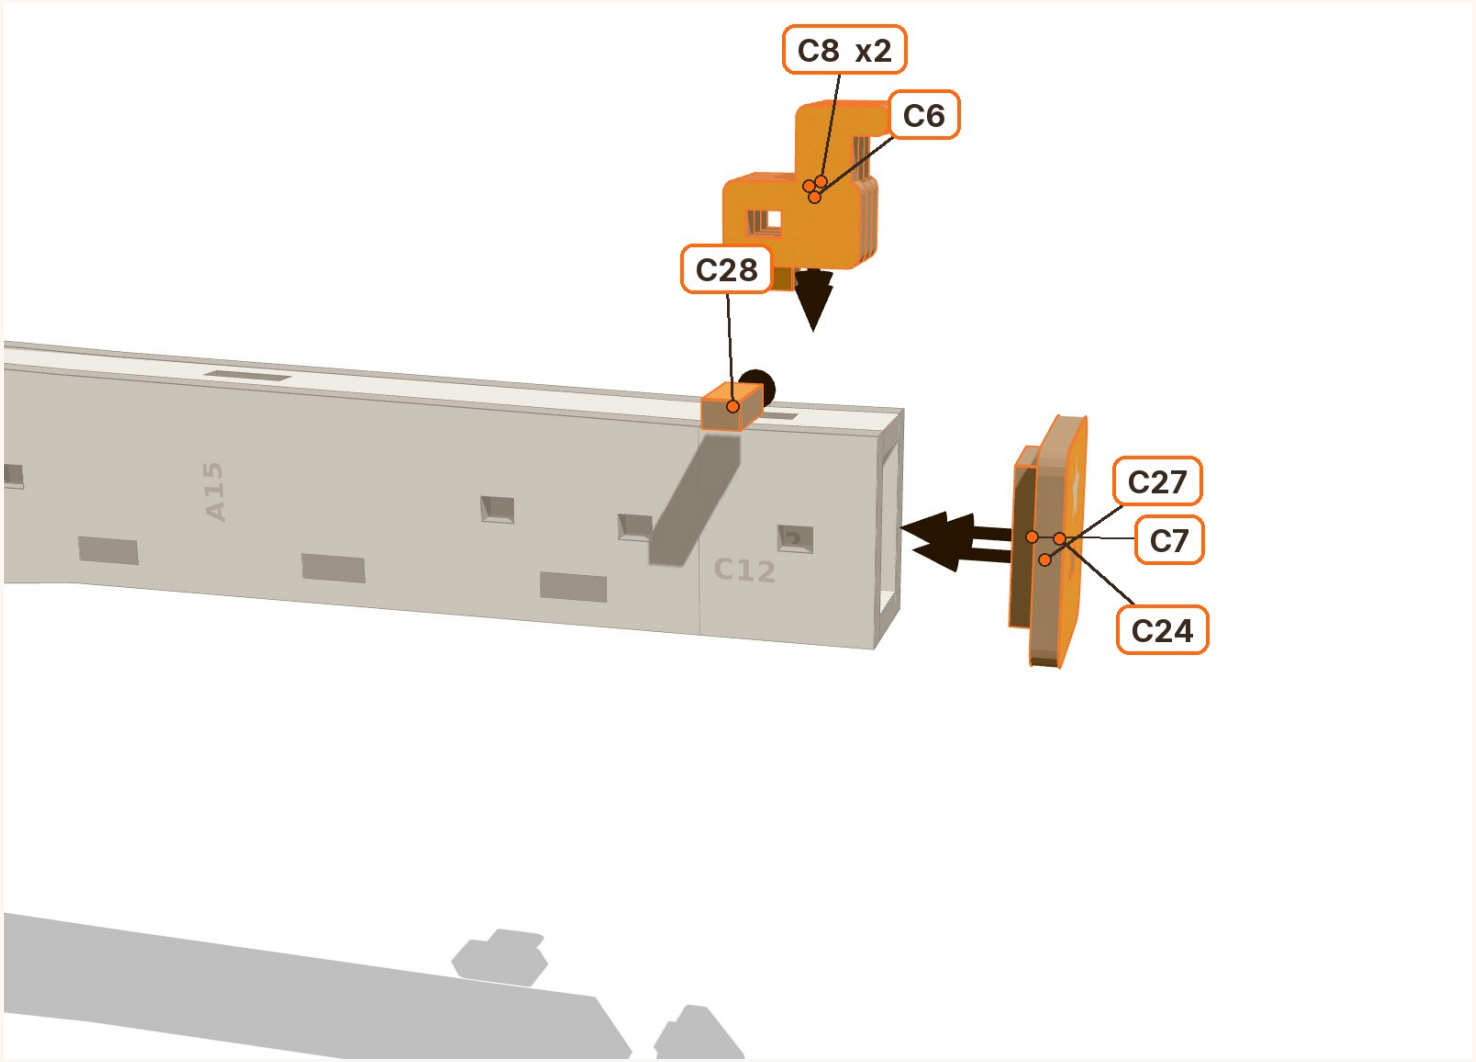

Line up the three dowels and all the rib tabs, then press evenly.

TEST IT NOW
Pull the trigger 8 times. The wheel should step one tooth per pull.

6 Build the blaze orange nose

See it in 3D

This orange box must stay on the ship: it marks it as a toy.

7 Add the right hull skins

9 Add the reactor rings

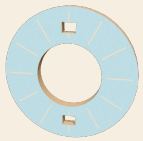

See it in 3D

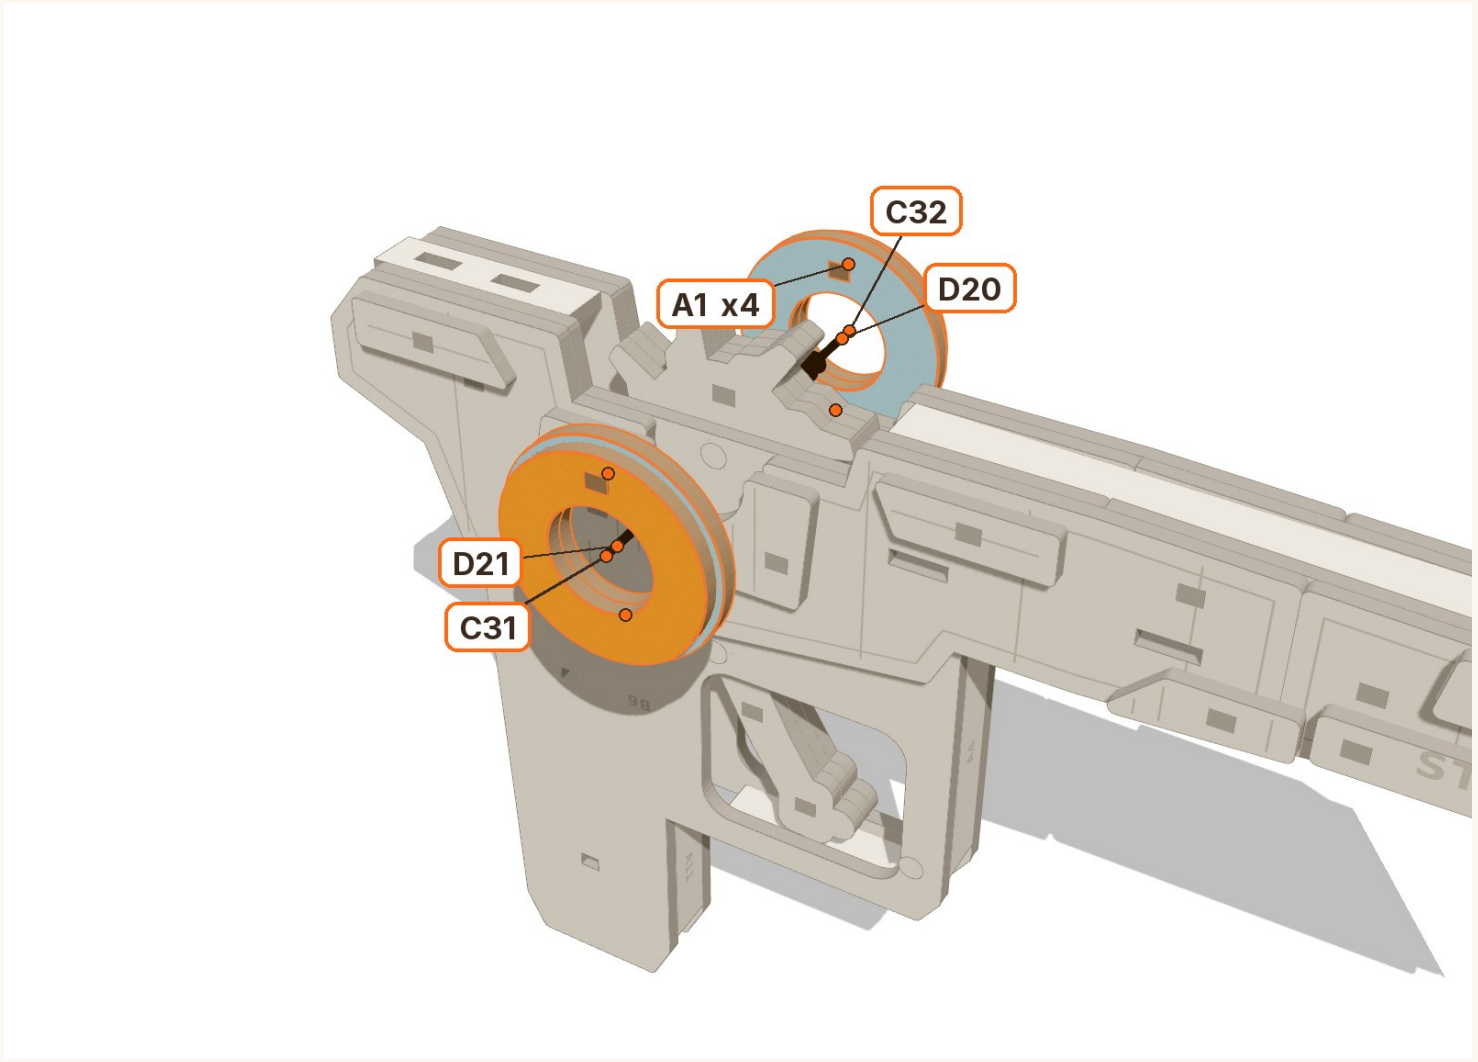

A1 x4

C31

C32

D20

D21

Rings sit around the wheel axle on both sides.

10 Fit the cockpit canopy

See it in 3D

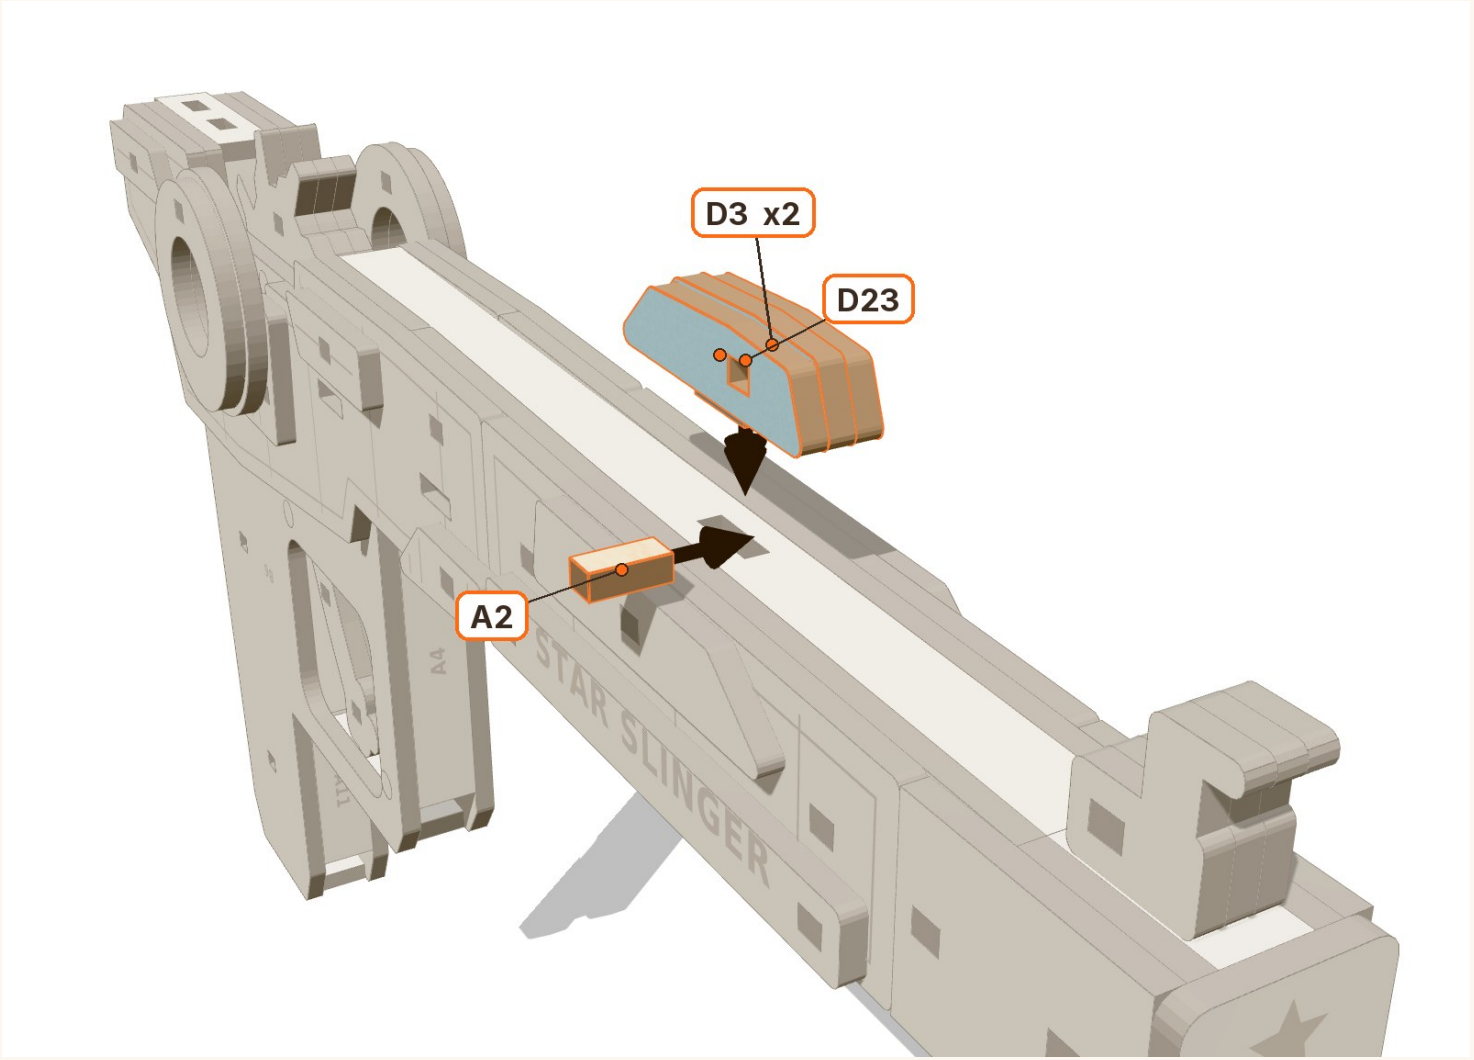

A2

D3 x2

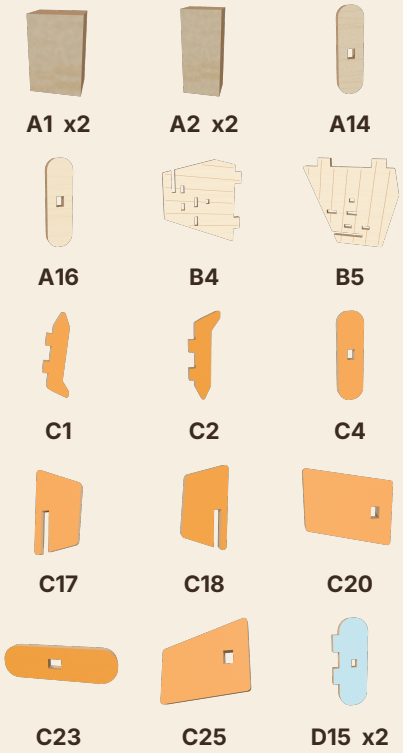

D23

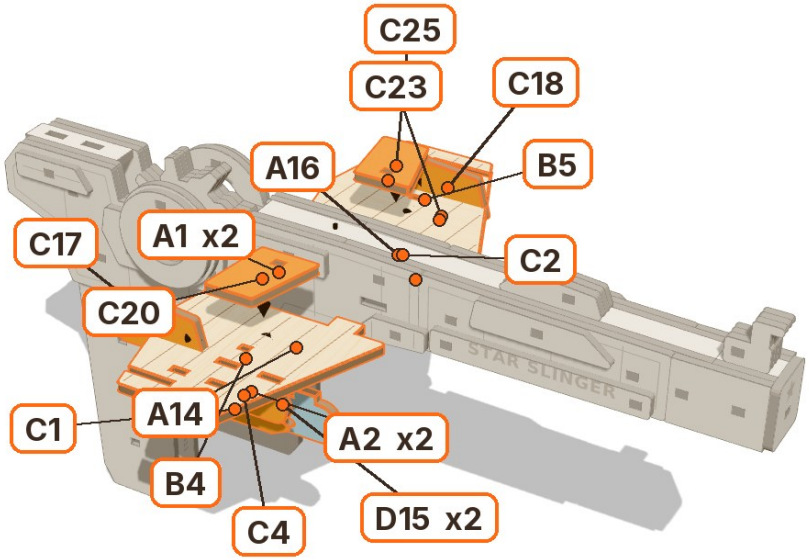

The canopy tabs go into the deck rib.

11 Slide in the wings

See it in 3D

x2

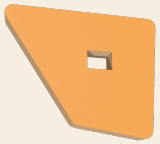

Each wing has two tabs that go through the skin and the wall.

12 Raise the tail fin

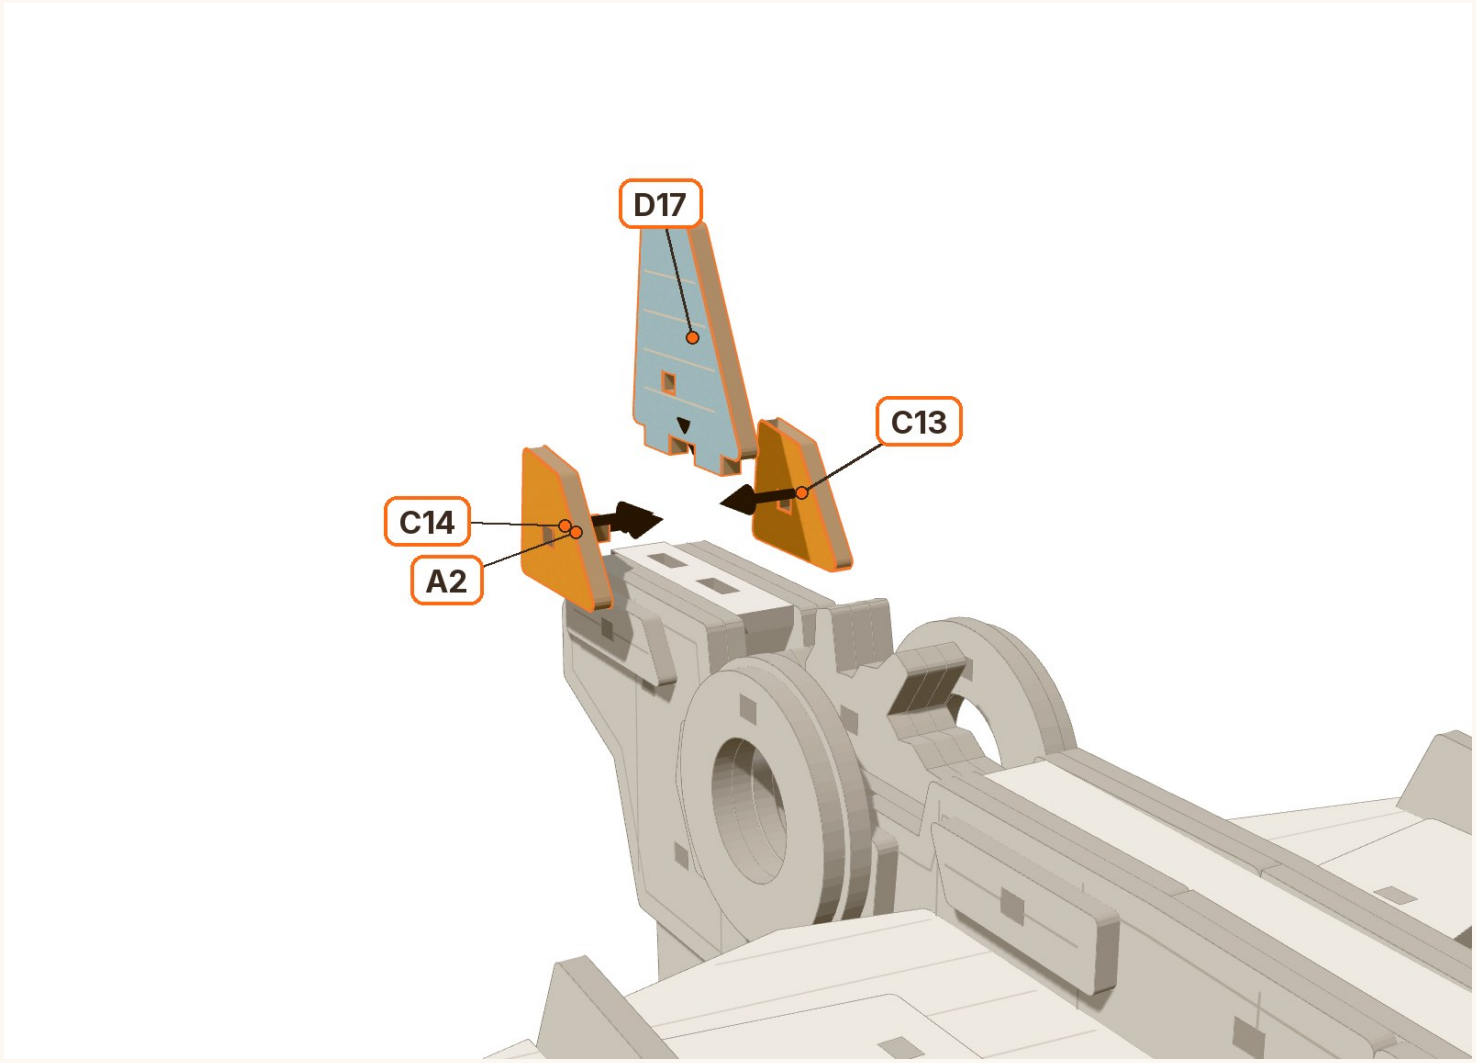

See it in 3D

A2

C13

C14

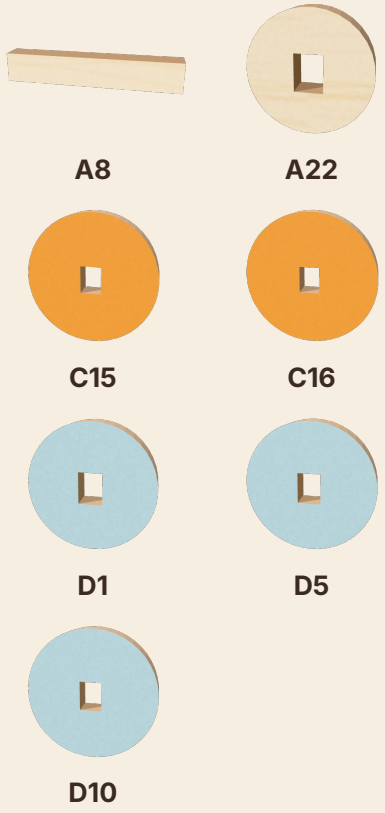

D17

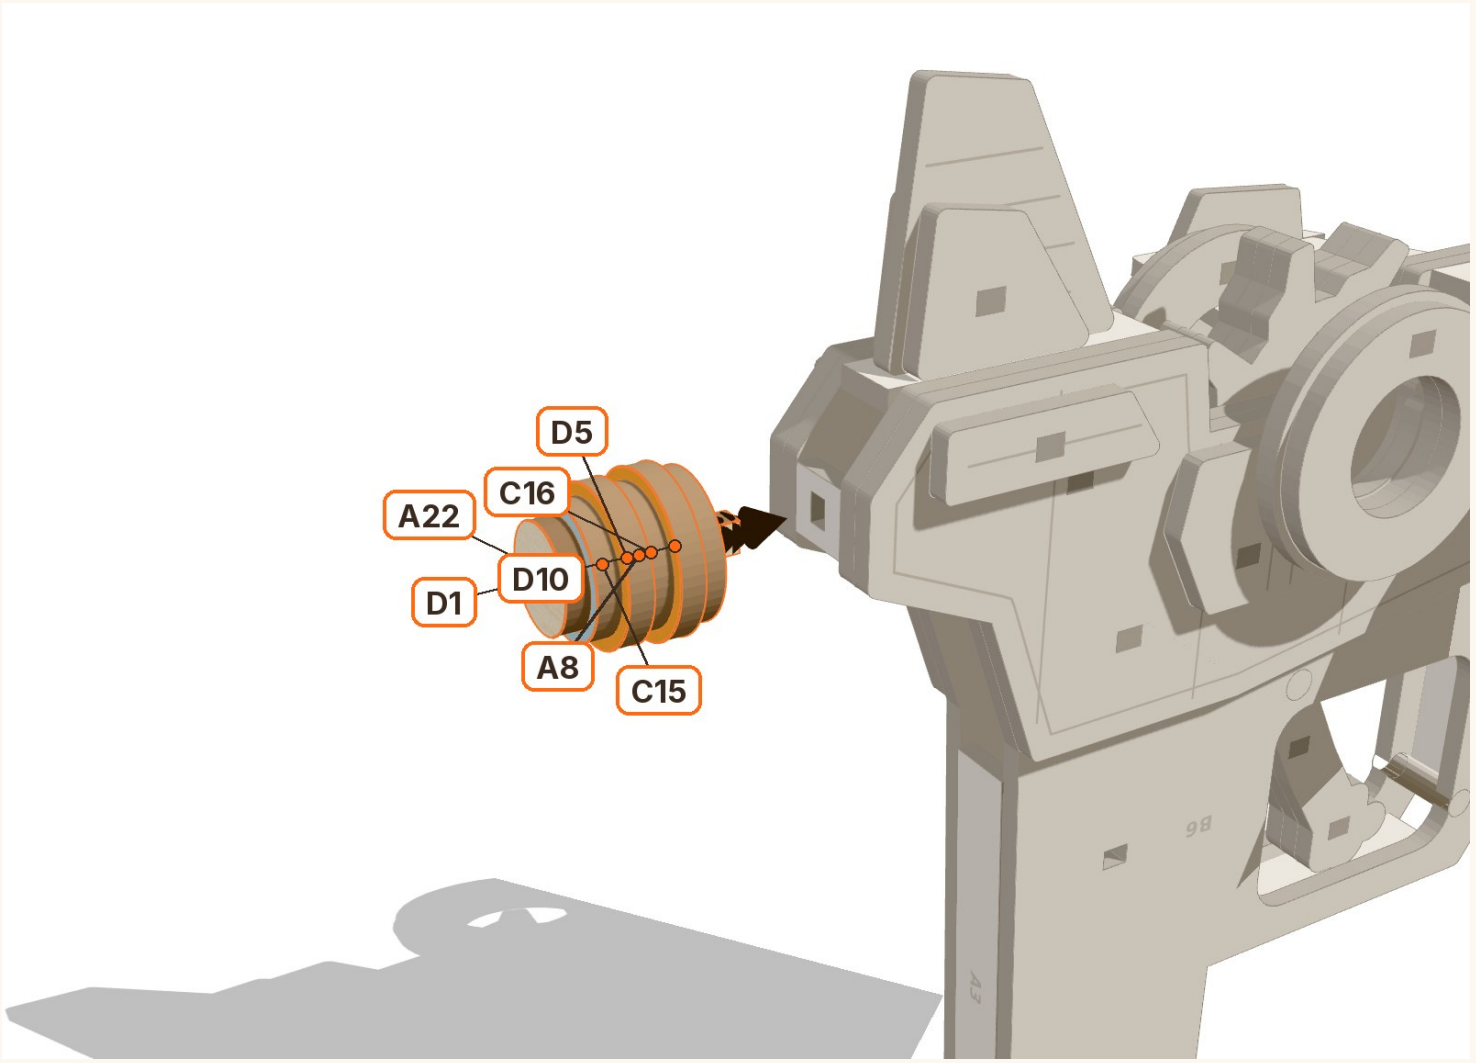

Its two tabs go into the top rib behind the wheel.

13 Build the thruster

See it in 3D

The peg goes into the tail. Then stack the rings, big ones first.

14 Add the grip panels

See it in 3D

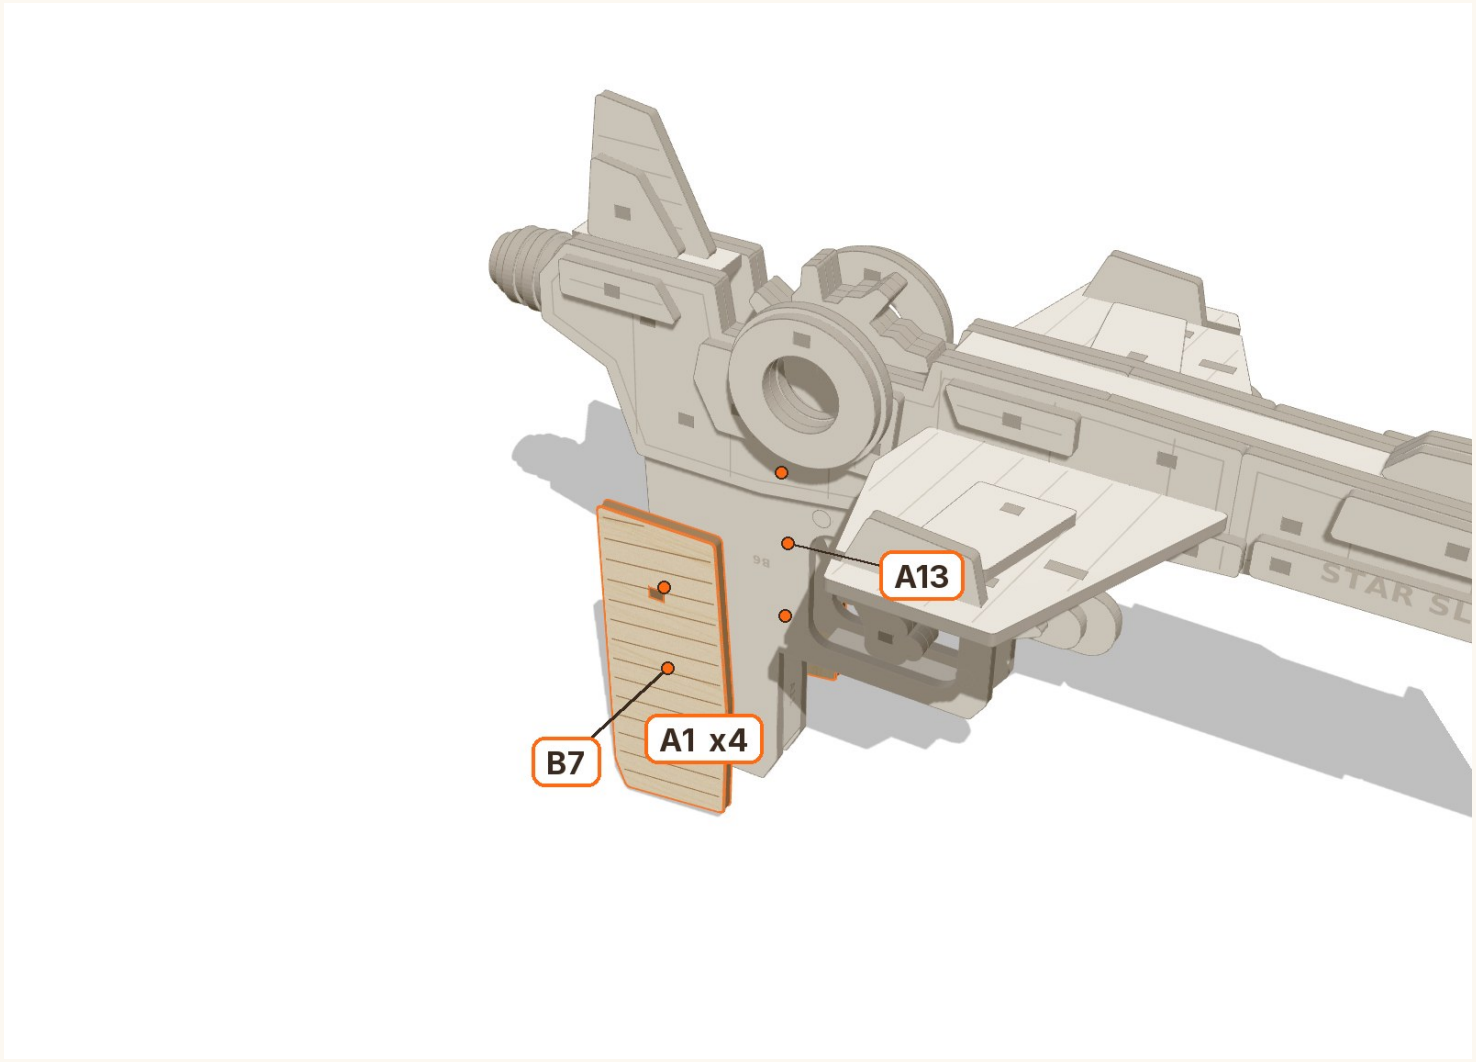

A1 x4

A13

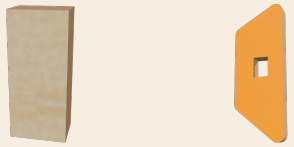

B7

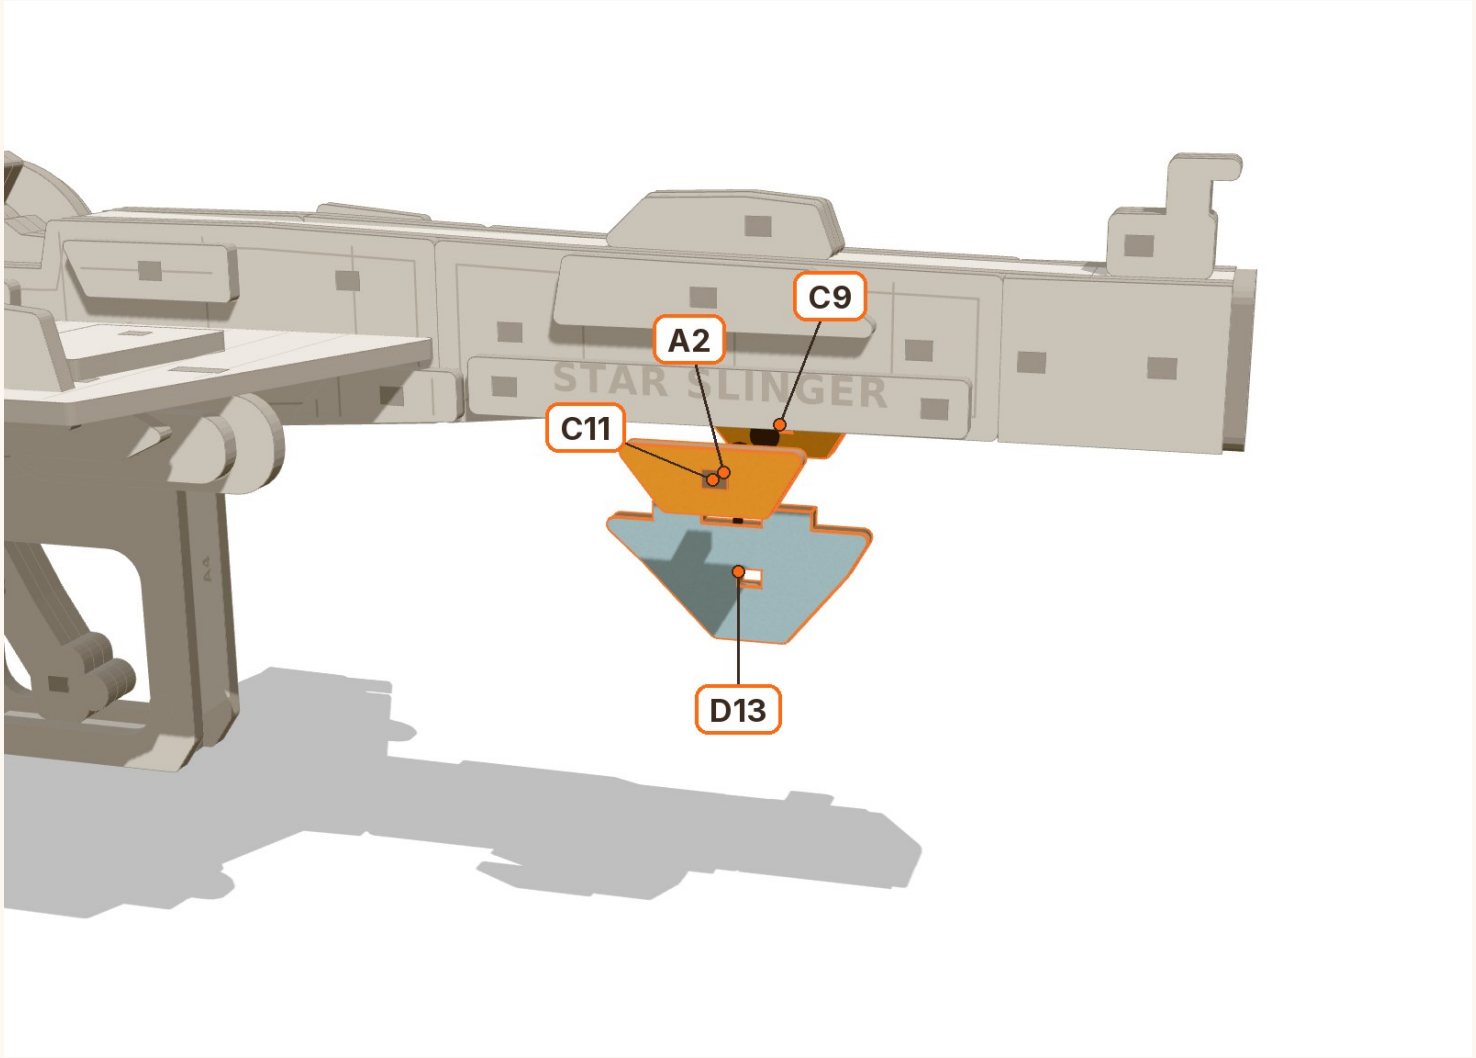

Textured panels on both sides of the grip.

15 Add the belly fin

See it in 3D

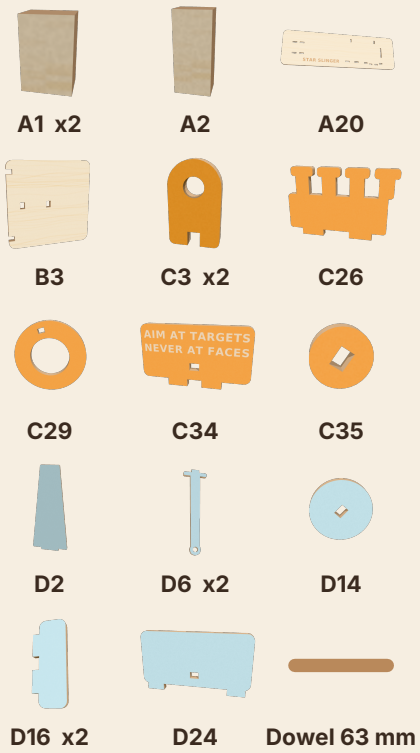

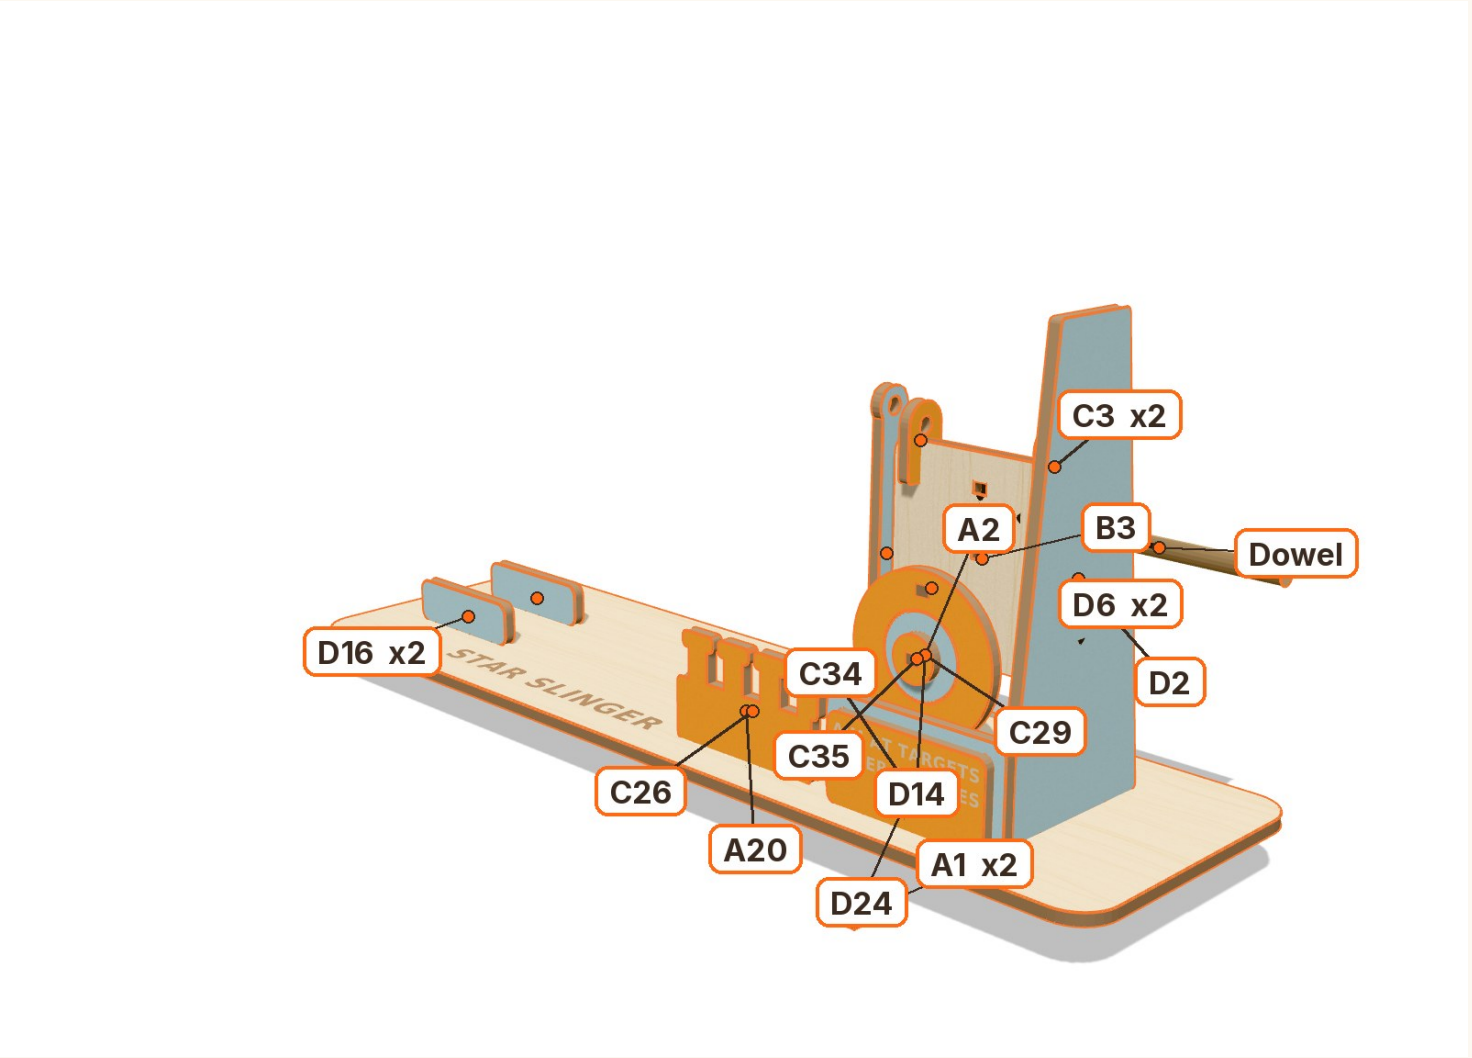

Tabs up into the keel, then a stripe on each side and one peg.

16 Build the launch stand and the target

See it in 3D

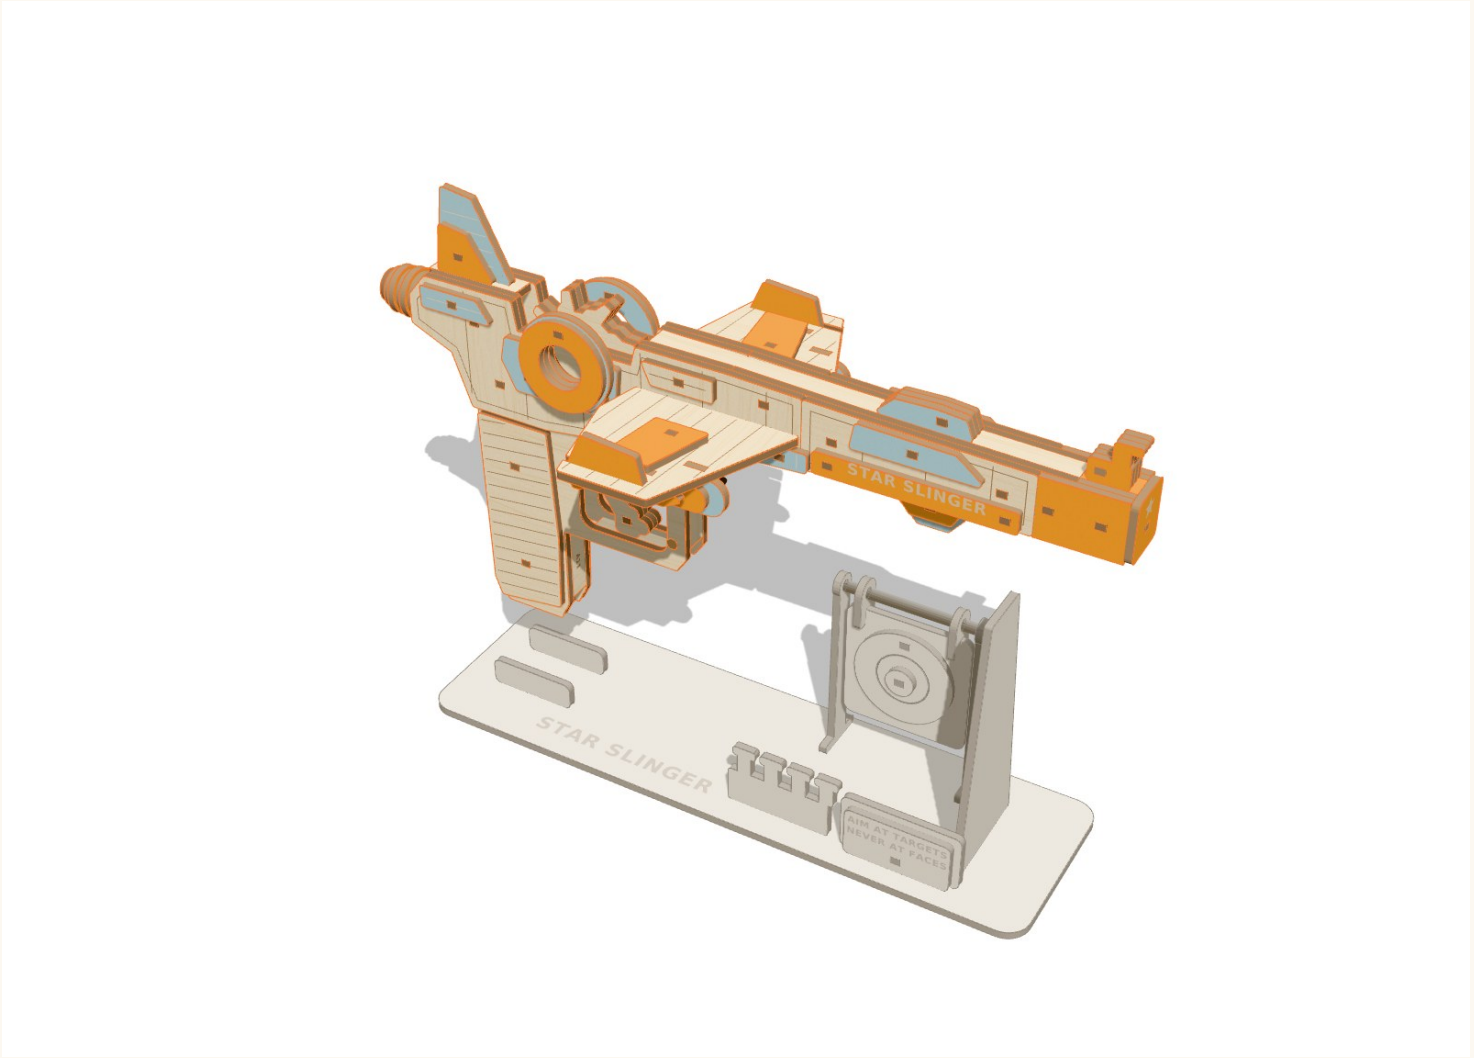

The target hangs on its dowel and swings when hit.

TEST IT NOW
Tap the target plate. It should swing back and settle again.

17 Put the ship on its launch stand

See it in 3D

No new parts in this step.

Grip between the two boots, barrel on the upright.

You built it!

Only fire #64 rubber bands. Load at most 7.

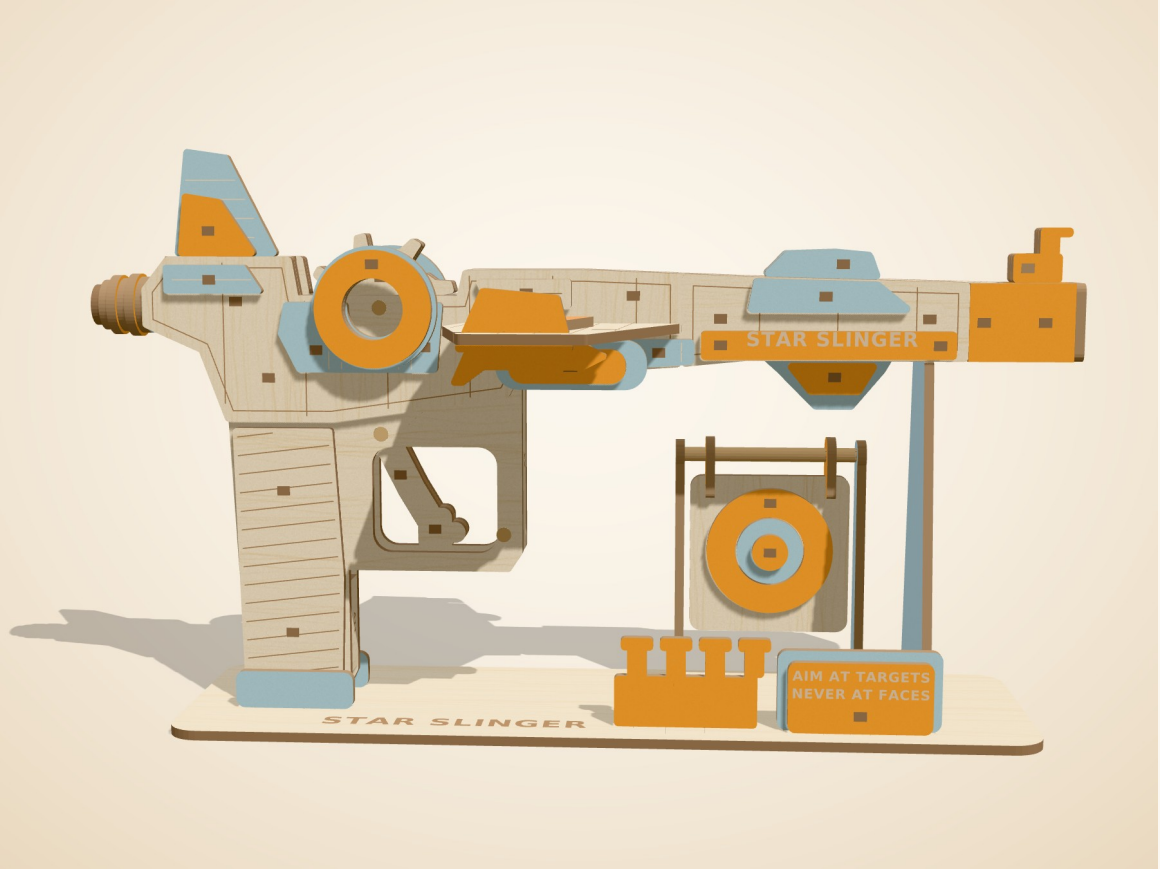

Wear glasses. Aim only at the target. Never at faces, people or pets.

Keep the orange nose, plug and cap on the ship. They show it is a toy.

Dust it with a soft dry brush. Keep it out of hot sun and damp rooms.

If a part works loose, press it back in. A tiny drop of wood glue is fine for repairs.

Missing or broken part? Send us the code from the parts map and we will mail a new one.
